BAeR® - Agentur für Bodenaushub GmbH

Presentation

In the Saxonian, Thuringian and Bavarian area we are well-known as "Bodenbörse" or "Bodenbär" in the construction industry. Furthermore, building enterprises, architects and authorities know our firm under the registered name "BaeR – Agentur für Bodenaushub GmbH" and they contacted us on conferences of the technical academy Esslingen, on the environmental institute Offenbach or at the Federation of soil.

As a public and sworn expert for the reorganization of contaminated land, we ensure a national and independent execution of the projects. In addition to that we guarantee an officially approved technically high-quality treatment of the assigned projects.

BAeR® – Agentur für Bodenaushub GmbH, Planitzer Str. 2, 08056 Zwickau, Germany is a geological and pedological service company and it was founded 1994 as a sole proprietorship by Dipl.-geologist Frank Bär. The change of the entity from a sole proprietorship to a limited liability company was a result of the rising variety of activities and the increasing number of employees. Today our team of six is working on projects in local and national areas as well as abroad (for example alternative road construction in Columbia).

We realize authorized, cost-saving, alternative possibilities of disposal and recycling using our long-time experience. Furthermore we are acting nationwide as lecturer at different institutes and committees and we present constantly our knowledge.
